

# VITAPLEX V8

## Worm Powered

Good soil is alive. When worms are active, crops thrive. Vitaplex V8 is designed to capture everything that makes worm-rich soil so powerful, and deliver it straight to your fields in a simple liquid form.

The base of V8 is vermicast, the compost produced by earthworms. Worms don't just recycle organic matter – they transform it. As material passes through the worm, it's converted into humic and fulvic acids, natural plant growth regulators, enzymes, and beneficial microbes. These act like a surrounding the roots, competing with disease organisms, and helping the plant stay healthier for longer.

To make sure nothing is locked away, V8 is produced using a cavitation process, the same physical force that can pit a ship's propeller or cut through metal. In our process, cavitation breaks vermicast down into tiny, micronised particles, releasing bound nutrients and stimulating the microbes to full activity. The result is a liquid that crops can readily absorb, with no wasted energy and no delay.

In addition to the worm extract, V8 also contains Humate, which improves soil structure and nutrient uptake, and a specialist microbial blend called Megabactors, which colonise the root zone to release nutrients, suppress disease, and break down residues. Natural carbon sources are added to feed and stabilise the biology, ensuring the product remains active in the soil.

And here's where V8 really pays its way: when you use it with your other inputs, it makes them work harder for you. With nitrogen, more stays in the soil and less is lost to the air or drains.

With fungicides, V8 helps the spray spread and penetrate better, while the microbes support the plant's own defence system – so your sprays go further and last longer. With herbicides, V8 helps actives move into the weed faster for a cleaner kill, while also helping your soil recover afterwards. The effect on the farm is clear:

## More from your fertiliser

With less losses to the atmosphere and environment.

## Better spray efficiency

Fungicides and herbicides penetrate deeper, last longer, and use less.

## Better soil structure

Holding more moisture in drought, draining faster in wet weather.

## Stronger, healthier crops

With deeper roots, better nutrient use, and greater resistance to stress from frost, drought, or disease.

## Higher performance

Crops that stay greener for longer, fill grain better, and deliver more yield.

V8 is one of the most cost-effective biological tools available. It's an easy way to bring the benefits of worm biology and modern soil science onto any farm.

## Smarter Inputs are Bio-logical

- Unlocks more from your inputs
- Builds resilient soils and crops
- Delivers better returns at low cost

## V8: Feed Today. Liberate Nature.

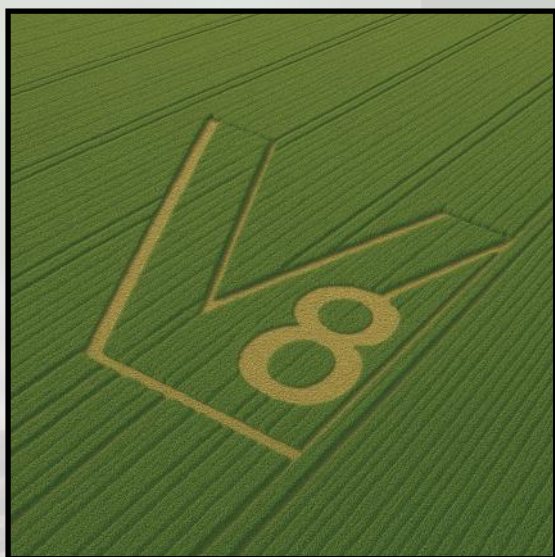

### UNLOCKS RESOURCES

### BUILDS RESILIENCE

### LOW COST

### Nature's Power.

- Harnesses Earthworm Power
- Maximises Nutrient Uptake
- Builds Soil and Crop Health
- Activates Nature's Processes
- 100% Organic Safe
